## SKILLS

---

HTML, CSS, Javascript (ES6+), React JS, Redux, Typescript, Axios, Express JS, Node JS, REST API, Websockets, Git/Github

## WORK EXPERIENCE

---

### Junior Software Engineer | TapFin (Tapsys Pvt Ltd.)

Mumbai, India | Sep 2025 – Present

- Engineered end-to-end modules from scratch with full ownership using React.js and TypeScript for enterprise B2B products, driving frontend design and architectural decisions across electric vehicle (EV) analytics dashboards, fleet tracking and management system, and driver management systems.
- Designed robust global state architectures using Redux-Saga to handle multi-step flows, race conditions, side effects, and heavy API polling across critical user journeys.
- Developed dynamic interactive tracking maps integrating Leaflet.js, rendering custom asset markers, real-time vehicle telemetry, trip histories, and alerts management while handling complex data.
- Architected the core UI interface and functional workflows for an in-app real-time AI chatbot, managing complex WebSocket event handling and message streams, and built the end-to-end vehicle resell marketplace.
- Implemented secure authentication flows (login, signup, role-based access control) and refactored legacy modules to ensure clean code separation and maintainability, leveraging React context management and Axios interceptors for resilient error handling and race-condition prevention.
- Contributed to core fintech product workflows, building intuitive interfaces and internal admin portals for the Loan Management System (LMS) and Customer Management System (CMS) to streamline credit evaluations and operations, while actively conducting code reviews to uphold code quality.

### Associate Software Engineer | Accenture

Mumbai, India | Feb 2025 – Aug 2025

- Collaborated with large cross-functional onshore and offshore teams to design, build, and configure enterprise applications aligned with complex business requirements, actively debugging and resolving critical application bottlenecks. Contributed to a large-scale data migration initiative for a premier Australian banking client, coordinating defect lifecycles, documentation, and version-controlled updates using Jira, Confluence, and Git.

### Software Intern | Broadway (Think9 Digital Consumers)

Mumbai, India | May 2024 – Jan 2025

- Worked from scratch as part of the core engineering team in a fast-paced, early-stage startup environment, leveraging Agile/Scrum methodologies to build and maintain internal admin dashboards with intuitive, responsive designs supporting Broadway's B2C e-commerce platform and mobile app, enhancing user experience.

## EDUCATION

---

### Bhavans College (Mumbai University)

Bsc Information Technology – CGPA: 8.78/10.0

Mumbai, India

June 2021 – May 2024

## PROJECTS

---

### Ingredify (AI Recipe Generator) – ([Link](#))

- Developed a full-stack MERN web application to generate AI-powered recipes based on user-provided ingredients and explore categorized recipes via Spoonacular API integrated with real-time data fetching
- Built a responsive User Interface design with React, Vite, and reusable components, ensuring smooth navigation and optimized performance across devices enhancing overall user experience and accessibility.

### Rentwheel (Vehicle Rental) – ([Link](#))

- Developed a responsive and Mobile-first layout MERN stack web application for vehicle rentals with filter functionality to enhance user experience and facilitate vehicle rental, driver hiring, and vehicle listing services.
- Utilized reusable components, React states, and hooks for dynamic UI and efficient state management and incorporated error handling. Implemented JWT authentication, password hashing and session management.
- Integrated Stripe Payment Gateway using the Stripe API key to securely process transactions.
